

Technical Data Sheet: ZSPTC9163

PTFE Cloth Tape

ZSPTC9163 is a fiberglass cloth base material impregnated with polytetrafluoroethylene (PTFE). Single surface treated and coated with a silicone adhesive exhibits excellent heat resistance and mechanical strength.

Characteristics

- Excellent high-temperature resistance
- Good dimensional stability that the tape is exposed to extreme heat will not sustain irreversible warping
- Have a low friction coefficient
- Excellent properties for electrical insulation, heat, chemical and water resistance
- PTFE cloth provide anti-adhesive properties

Applications

- Suitable to be used in large-scale solar panel lamination processes that are exposed to extreme heat
- Roller wrapping where anti-adhesive and high temperature resistance is required
- Bag sealing machine

Properties

Properties	ZSPTC9163	Standard
Tape Colour	White	-
Tape Thickness (µm)	160	-
180° Peel Adhesion on Steel (g/25mm)	800	ASTM D3330
Tensile Strength (kg/25mm)	25	-
Temperature Resistance (°C)	260	-
