

Technical Data Sheet: ZSPTC9250

PTFE Cloth Tape

ZSPTC9250 is a woven fiberglass cloth base material impregnated with polytetrafluoroethylene (PTFE). Single surface treated and coated with a silicone adhesive exhibits excellent heat resistance and mechanical strength.

Characteristics

- Excellent high-temperature resistance and can continue working from -70 to 360 °C without decreasing in ability
- Good dimensional stability that the tape is exposed to extreme heat will not sustain irreversible warping
- Have a low friction coefficient that is suitable as an insulator.
- Easy release surface as the material can clean almost any surface and resist most types of oil and EVA glue stains
- Great chemical resistance, can withstand corruptions from strong acids and alkali

Applications

- Suitable to be used in large-scale solar panel lamination processes that are exposed to extreme heat

Properties

Properties	ZSPTC9250
Tape Colour	Brown
Tape Thickness (μm)	250
Tensile Strength (N/cm)	380
Temperature Resistance (°C)	-70 ~ 360
